

If you have large hunting handguns with top-mounted scopes, or bullseye pistols with fat target grips, consider the [Hyskore Modular Rack](#) which holds guns with the barrel on top and level, so there is plenty of clearance for scopes. Hyskore racks are made of soft, closed-cell foam that won't scratch metal and won't absorb moisture. Guns are stored in individual foam bins that can be connected together horizontally. The width of each individual bin can be adjusted to fit even very wide target grips. Hyskore racks come in sets of three foam bins. Using [3/16" threaded crosspins](#), you can combine the bins into one, long secure unit running the full width of a shelf.
