Bull's Eye Competition Range Box

The HYSKORE® Bull's Eye Competition Range Box has been designed to meet the needs of the bull's eye shooter. It addresses the key issues of transporting guns to the range and setting up for competition and is constructed from welded heavy-duty diamond plate aluminum to provide many years of service.

Guns, Scopes, Ammunition, Protective Gear, etc. are not included!

Always wear appropriate vision and hearing protection when using this product!

Introduction

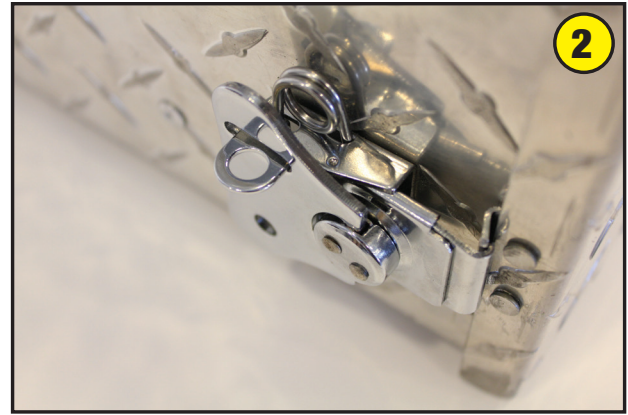

If you are an old time bull's eye competition shooter, you probably remember the days when everybody brought their guns to the range in a Pachmayr® competition pistol case which, with the addition of the Gil Hebbard spotting scope mount, was the perfect accessory set up for this sport. For some reason Pachmayr® withdrew from this product line. Then about eight or ten years ago HYSKORE® came out with a similar case, but we also withdrew the item because it could not be consistently made to our standards. This has mostly left bull's eye shooters in the position of having to find a used or a custom made case. Just about all the old cases were made from either plywood or MDF with some type of vinyl covering. As good as these materials are they are heavy and have service life limitations. At HYSKORE® we have done our best to develop a case that meets the needs of shooters, provides a long service life, and is affordable.

The HYSKORE® #30259 Bull's Eye Competition Range Box is constructed from heavy-duty diamond plate aluminum that has been formed and welded to make a case that has superior structural integrity and long term wear characteristics. We have incorporated the following features into this case:

- A closed cell foam gun support system that will accommodate four (4) scoped competition target pistols including everything from a Browning Buckmark or Ruger Mark II up to and including a Walther GSP. There are 2 slots for target width grips with palm rests and 2 for 1911 width grips. The gun support assembly is mounted to a tray that can be removed to provide easy access to each gun. In addition, there is a web strap that can securely hold the guns in place.
- Immediately above the guns is a removable drawer / tray for ammunition, spotting scope, hearing protectors, safety glasses and other accessories.
- The lid uses a piano hinge for strength and ease of operation.
- In the closed position the lid is held securely to the case by two (2) toggle twist latches similar to the type used on high end cargo cases.
- Although the latches can be secured with a user supplied padlock, the case is not intended to be a security device. It is intended to be used as a shooting support system at the range and a container for transporting guns to and from. Gun security and custody is becoming a high profile social and political issue and it is a serious responsibility for the gun owner.
- The set includes a spotting scope mount that can quickly and easily be attached to, and removed from, the upper tray.
- The entire set (without guns, ammunition, etc.) weighs in at only 9 lbs.
- The underside of the case is supported on 4 rubber feet.
- An industrial spring loaded carry handle is included for ease of transport.

Install the handle – Use five (5) of the supplied machine screws and five (5) insert lock nuts to secure the handle to the top of the case.

Install the latches. Using three (3) machine screws and three (2) insert lock nuts install the twist latches to each side of the case as shown. The keepers have been factory installed.

Install the feet using four (4) screws and four (4) nuts.

The spacing between the slots that hold the guns is different. This is so that guns with both wide & narrow grips can be supported.

Space #1 is 65 mm / 2 ½ in.

Space #2 is 50 mm / 2.0 in.

Space #3 is 40 mm / 1 ½ in.

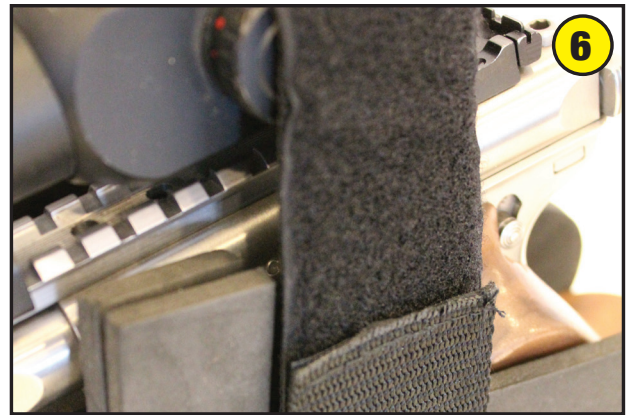

Space #4 is 40 mm / 1 ½ in.

The foam material can be cut or sanded to make a custom fit.

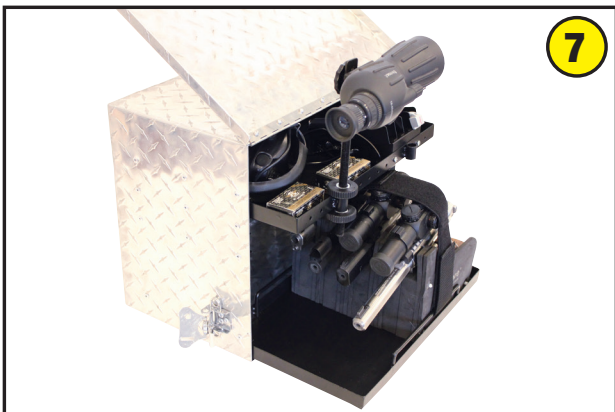

Use two (2) screws & nuts to fix the magazine rack at a convenient location. Do not locate it too close to the socket where you intend to mount your spotting scope as it will not allow enough clearance for the knob. (See step #9)

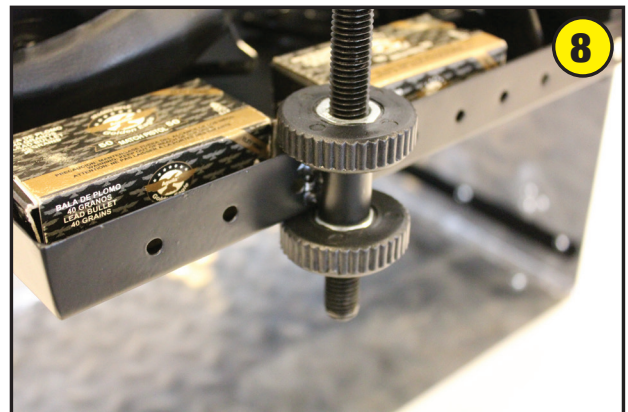

The magazine rack can hold 4 double stack magazines.

Once your guns are in place use the web strap to secure them.

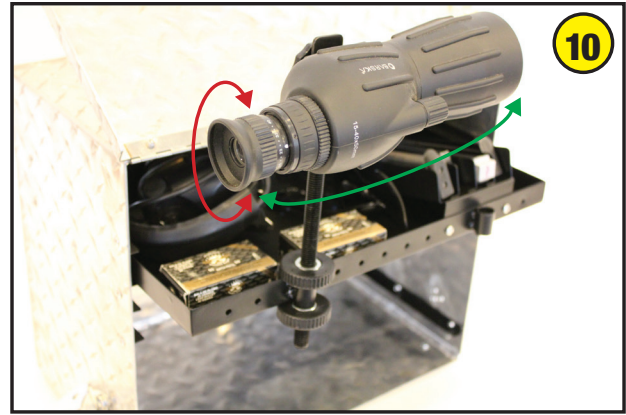

Install the drawers as shown. The drawers fit between guides that prevent tipping.

Assemble the scope mount by first threading one plastic lock knob onto the shaft, and then put the end of the shaft through the tubular support on the drawer and fix in place with the other knob. The mount can be adjusted lower or higher.

All modern spotting scopes have a ¼" x #20 female thread (along with all modern video cameras, binoculars, digital cameras, etc.) for attaching tripods and other devices. Take the plastic knob and fit it over the shoulder bolt so that the hex portion of the bolt fits in the hex shape socket and is flush with the surface of the knob. Now take the shoulder portion of the bolt and insert it in the large hole in the scope mount and then thread the ¼" x #20 male thread into the ¼ x #20 female thread on your spotting scope. Tighten the knob and your scope will be held securely in place. Use this knob and the knobs on the threaded stem of the mount to adjust and secure the scope to the desired position. The small hole in the mount is tapped ¼" X #20 and is used for storing the knob/shoulder bolt.

The scope can be both elevated and adjusted left to right.

The drawer can be used to store a scope and accessories.

The drawer that holds the guns can be removed to allow fast access to all 4 guns.

The latches are mechanical and from time to time should be lightly lubricated with acid free machine oil.
